

ZTT GROUP

Established in 1992, ZTT started from optical fiber communications and was listed on Shanghai Stock Exchange (SSE) in 2002 (Stock Code in SSE: 600522). ZTT has pictured a diversified industrial portfolio for marine equipment, renewable energy, new materials, smart grid, optical communications and other diversified industrial products. ZTT Group is now hosting 80 subsidiary companies and over 16,000 employee, operating 5 overseas plants located in India, Brazil, Indonesia, Morocco and Turkey . ZTT owns more than 2500 patents with independent intellectual property rights, presided over or participated in more than 500 international and national industry standards. The products of ZTT are exported to 160 countries and regions .The company has ranked among the top 500 Chinese enterprises for consecutive years and broke through \$13.4 billion in sales revenue in 2022. ZTT follows the new economic model of fostering cleaner production and accelerating green and low-carbon development, works hard to serve as the pioneer of persistent endeavor to achieve national goal involving carbon dioxide emissions peaking by 2030 and carbon neutrality by 2060, emerging as a green manufacturing technology group assuming regional economy.

ZTT focuses on the cable material sector, The production base is located in Nantong Rudong Ecnomic Development Zone, covers an area of more than 73500 square meters. Production base has 106 technical researchers, 326 production technicians, and 14 senior experts and doctors. Employees with a bachelor degree or above are more than 50% of all employees, high-quality talent team provides a strong guarantee for the company's sustainable development.

The products are mainly various types of copper rods, copper strips, copper tubes, copper bars, winding wires, and various cable sheath materials, fling materials, etc.Products are widely used in high-end felds such as precision electronics, automobiles, communications, new energy, high-speed rail, shipbuilding, wind power, dilling, submarine cable, etc.The annual output value exceeds 4 bllion yuan.

ZTT focuses on product quality, social responsibility, environmental friendliness, and has successiely pass the certification such as ISO9001, ISO14001, CNAS, OHSAS18001, TL9000, energy management, measurement management, and Integration of industrialization and industrialization. Since its establishment, with Manufacturing Ingenuity as the culture of the company, committed to technological innovation. Through unremitting efforts, we have won National high-tech enterprise, National advanced enterprises implementing excellent performance model, Provincial enterprise technology center, Provincial green factory, and Provincial technology innovation demonstration enterprise.

Copper products

Oxygen free copper rod

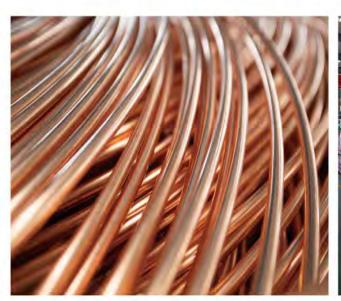

Oxygen free copper rod used high purity cathode copper as row material, and uses the up-draw process to pull the copper rod billet. The standard size include $\Phi 20.0 \text{mm}$ 17.0 mm 12.5 mm 8.0 mm. Copper rod can be reproduced 8.0 mm hard copper rod after pressing and 2.0-3.5 mm soft copper wire and hard copper wire after drawing. Our production line has an annual output of 80000 tons of oxygen free copper rod and copper wire.

Application

Power cable/Electric machine/Enamelled wire

Technical Reference

Brand	State	Diameter	Copper content	Oxygen content	Tolerance	Elongation	Torsional property	Volume resistivity p20°	Copper powder content

■ Copper products

Copper wire

With high quality cathode copper and copper rod as raw material, relying on advanced double big pull machine, specializing in the production of tailored for customers, and is suitable for small and medium-sized state of the soft copper wire, specifications are available from 0.1 to 4.5mm, take up way for the line in the plum blossom and tightly closed line, the production of copper wire surface brightness, no burr and oxidation, discoloration resistance is strong, the performance indicators meet the national standards GB/T 3953-2009.

Application

Power cable/Electric machine/ Instruments

■ Copper products

Copper foil

Electronic copper foil is a metal material made by depositing copper ions on the cathode roller using an electrochemical method. It is mainly used for printed circuit board conductive materials and lithium ion battery negative current collectors.

They are the "nerves" and "blood vessels" of circuit boards and batteries.

Plastic products

Polyethylene cable material

This product series uses the high quality polyethylene resin as the main raw material, through adding the antioxidant, the lubricant and other auxiliary agent (AT material adds the electric resistance trace auxiliary agent, the flame retardant polyethylene adds the flame retardant agent), through the specific process production to make the finished pellet. The product has excellent physical performance and processing performance, and the performance indexes meet the requirements of GB/T15065-2009 and DL/T 788-2003 standards.

Application

Power cable/Communication optical cable/ADSS cable

LSZH sheath material

The halogen-free low smoke flame retardant sheath material for communication cable is made of polyolefin resin as the base material, adding flame retardant, antioxidant and other special auxiliaries, and through mixed plasticization and granulation. It has the characteristics of smooth surface, good mechanical properties and excellent electrical properties. The cable material meet the requirements of Rosh and reach regulations, and it can be used for communication cables.

Application

Power cable/Communication optical cable

Product model and application

Model	Name	Purpose
FN2543	Cracking and halogen-free low smoke flame retardant polyolefin sheath for outdoor optical cable

Filler material

The filling material for communication optical cable is based on polypropylene, adding toughening agent, inorganic filler, antioxidant, lubricant and other additives, and then mixed, plasticized and granulated. The product has excellent extrusion stability and high setting out speed, good mechanical properties and meets the Rosh instruction. It can be used to extrude the filling line of communication optical cable.

Quality Management

ZTT always insists on "Quality comes first" and "Focusing on prevention"; and has already passed ISO9001 certifica- tion.

Meanwhile, ZTT has strict- ly managed and controlled the process of design, manufacturing, installation, service, and so on.

Nowadays, ZTT is fully imple- menting Environmental Management System (ISO14001) and Occupational Health Safety Management System (OHSAS18001); thus gradually established a more comprehensive enterprise standard and regulation. Furthermore, ZTT is constantly improv- ing the environmental performance of prod- ucts to follow out the Sustainable Development Strategy, and highlighting its sense of social responsibility.

Quality management is the wing of ZTT, and the life source of ZTT brand. In order to improve the reliability of products, our company strictly abides by the tenet of "high quality, high reliability" in every stage of system design, material selection, process production, test and so on, and guarantees the realization of the quality target of "100% of products pass".

■ Infrastructure

CSR Activities

ZTT makes green manufacturing and sustainable development to be the value orientation of enterprise contribution to society while practicing the corporate social responsibility.

ZTT has made great achievement in developing and using of renewable energy resources based on the new technology. This initiative is not only a promising complement to existing energy supply system, but also a significant measure to implement environmental protection and ecological management.

ZTT has taken the lead in establishing the working mechanism of "Spiritual Home Engineer", and this creation has embodied the scientific managing principle of "people-oriented".

ZTT positively participates in the social philanthropy, and has founded "JDO Love Charity Foundation" to donate schools and help underprivileged children. JDO reacted immediately after natural disasters, donated and provided technology aids in the fight against catastrophic blizzards and icy rains disaster, Wenchuan Earthquake, Yushu Earthquake, and so on.
